

1. Decide what width outside corner you want/need and write that dimension (A) on the form.

2. Measure the length of the corner required and write the dimension (B) on the form. Paneled and fluted corners require an exact measurement. **Note:** Plain outside corners are sold in either 10' or 20' sizes. If you require a longer corner we can accommodate those sizes. We are able to ship up to 30' as one piece. Any longer and they will be shipped separately with pocket screws and glue to be joined in the field.
